

About the Beacon Factor

We've all heard the term "wonder drug" and, yes, some pharmaceuticals are just that. They work well and sometimes very fast. The same can be said about some biologics which are products produced by or derived from natural sources.

Nova Cells has the *Beacon Factor*, a "wonder biologic".

If you look through the [Nova Cells website](#) and especially its [blog](#) and patient testimonials, you'll quickly see for yourself what makes the *Beacon Factor* a genuine wonder product. You can also read how the *Beacon Factor* played a role in an amazing turnaround for a 76

year old Canadian with advanced dementia (Lewy Body Dementia) by going to <https://goo.gl/6GiSDr>.

How does the *Beacon Factor* work its "magic"? According to the *Beacon Factor's* inventor, biochemist and Nova Cells director of laboratory services, Abel Pena, his brainchild has powerful circulation-enhancing and inflammation reducing properties. In addition, it appears to greatly increase the number and activity of serotonin receptors on neurons (which increases or amplifies nerve signal transmission).

Says Abel, "The *Beacon Factor* was created by combining molecules that exist in all of us. In laboratory experiments and then later human use it proved very powerful in terms of enhancing circulation, suppressing inflammation and bolstering the number and activity of serotonin receptors in the central nervous system especially the brain. Patients including children who came in with cold, bluish limbs due to poor circulation had these pink up within an hour or less of receiving the *Beacon Factor*. And those with runaway inflammation including neuroinflammation and other brain imbalances showed dramatic reductions in this. In addition, the *Beacon Factor* amplifies the biochemical signals secreted by damaged tissue and boosts

the activity of lysosomes, the inner cell's 'digestive system', which then get busy digesting biological debris that litters damaged and diseased neurons and other cells."

No patent is being sought for the *Beacon Factor* as this is the surest way to hand off a great invention to others who'd then take the process to make it (disclosed in the patent application), modify it slightly, and then file their own patent application on it. It is an old story in the grants and profits driven world of academia, medicine, and Big Pharma.

By keeping the *Beacon Factor* an exclusive in-house product Nova Cells has been able to keep production quality *super high* and the cost per unit *very low* (Something reflected in the fact Nova Cells patients pay far less than what is typical among other foreign stem cell medicine operations for their treatment).

Nova Cells Institute welcomes your email and phone calls!
